

A unified digital platform for planning and managing the home-moving journey.

Move with confidence.

**Current home**

Prepare

Moving day

**New home**

# The Problem

---

## Moving is fragmented.

A single move can require coordination across multiple disconnected activities and providers.

### Tasks & dates

Important actions are easy to miss.

### Packing

Progress is difficult to track room by room.

### Budget

Costs are spread across several services.

### Providers

Price, quality and ratings are hard to compare.

# The Solution

---

## One journey. One clear view.

- Plan the move and understand what comes next.
- Manage tasks and packing progress.
- Track moving expenses and remaining budget.
- Explore moving-related service providers.
- Use intelligent comparison to make better service decisions.

### Moving Journey

Settle

# Core Experience

A complete moving workspace

---

## Overview

Days remaining, progress and next actions.

## Tasks

Create, prioritize and complete moving tasks.

## Packing

Track preparation by room and item.

## Budget

Monitor expenses and remaining balance.

## Services

Explore and filter moving-related providers.

## Guide

Practical moving guidance in one place.

# NAQL Smart Advisor

Smart NAQL Consultant

## AI supports the decision it is not the product itself.

The advisor compares relevant service options according to the user's actual priorities.

Lowest price

Highest quality

Best value

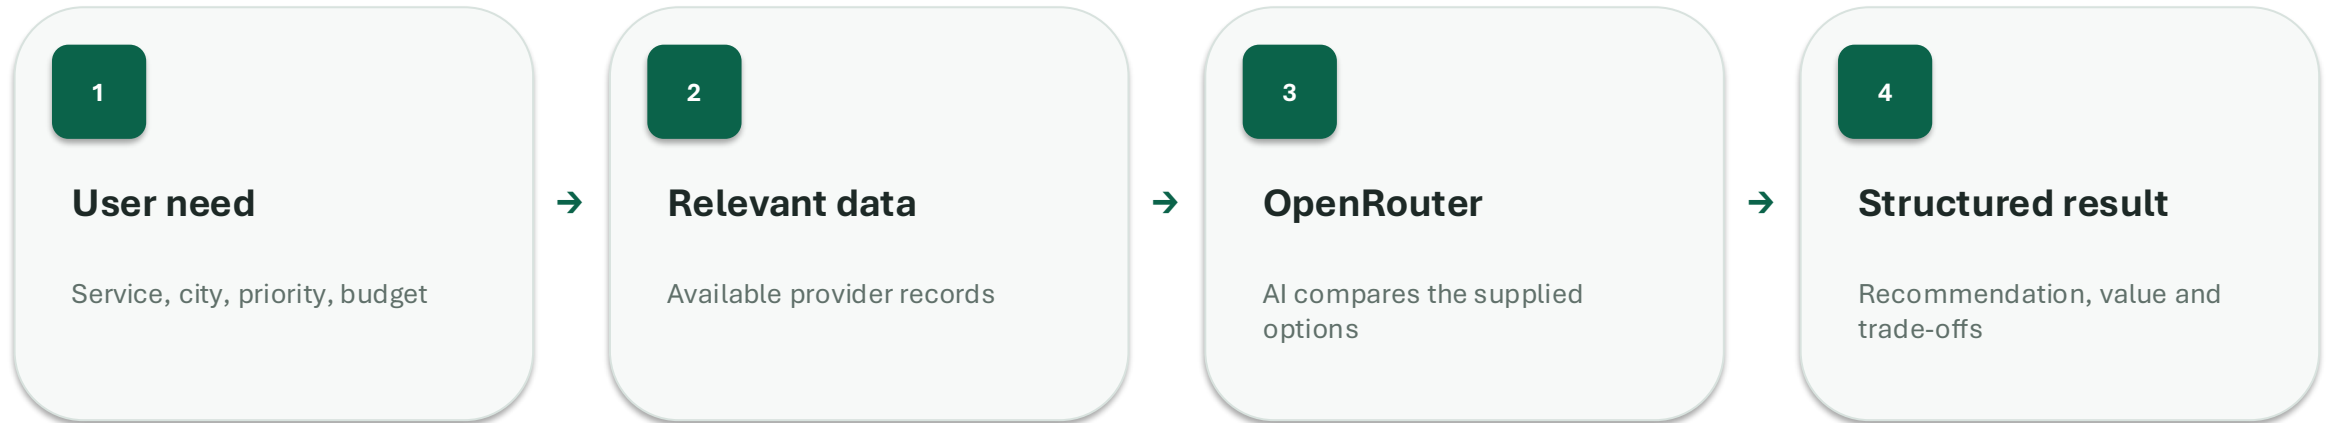

Highest rating

Fastest service

**Recommendation** Cheapest suitable option • Highest-quality option • Best overall value • Recommended choice + trade-offs

# How the AI Works

Grounded recommendations, not invented market claims

**Trust rule: NAQL only recommends from the provider information available to the platform. It does not fabricate prices, ratings or availability.**

# Product Design & Technology

Arabic-first, responsive and secure

---

## Experience

- Arabic-first RTL
- Responsive layouts
- Accessible controls
- Clear moving journey

## Technology

- Next.js
- TypeScript
- Tailwind CSS
- OpenRouter API

## Trust & Security

- Server-side API key
- Environment variables
- Input validation
- Validated AI output

# Future Direction

From planning tool to connected moving ecosystem

1

## Verified providers

Onboard and verify service partners.

2

## Live pricing

Connect real pricing and availability.

3

## Booking & payment

Complete the transaction inside NAQL.

4

## Persistent journeys

Accounts, reminders and saved history.

5

## Connected home services

Utilities and other relocation services.

**NAQL**

A clearer way to move.
